

# The Racial Market: Is There a Payoff From Changing Identity

Proposal

Grace Etzel, Lily Johnson, and Drew Wokon

Mentors: Dr. Sandy Darity, Ph.D and Dr. John Komlos, Ph.D  
American Economic Association Summer Program

June 10, 2025

Yes

# Literature Review

# Literature Review

- Nix, Emily & Qian, Nancy. “The Fluidity of Race: “Passing” in the United States, 1880-1940,” *National Bureau of Economic Research*. January 2015.
  - found that 19% of black males “passed” for white at some point in their life, which led to better social and economic opportunities.

# Research Question

# Research Question

Is there a causal relationship between racial passing and economic outcomes?

# Research Question

Is there a causal relationship between racial passing and economic outcomes?

Potential Outcomes

# Research Question

Is there a causal relationship between racial passing and economic outcomes?

Potential Outcomes

- Income

# Research Question

# Methodology and Potential Model Design

# Methodology and Potential Model Design

Difference and Difference Design with self-identification of race as the event measured.

# Methodology and Potential Model Design

Difference and Difference Design with self-identification of race as the event measured.

$$Y_{it} = \alpha + \beta_1 \cdot \text{Post}_{it} + \beta_2 \cdot \text{Treated} + \delta \cdot (\text{Post}_{it} \times \text{Switcher}_i) + X_{it}\theta + \mu_i + \lambda_t + \phi_r + \varepsilon_{it},$$

# Methodology and Potential Model Design

Difference and Difference Design with self-identification of race as the event measured.

$$Y_{it} = \alpha + \beta_1 \cdot \text{Post}_{it} + \beta_2 \cdot \text{Treated} + \delta \cdot (\text{Post}_{it} \times \text{Switcher}_i) + X_{it}\theta + \mu_i + \lambda_t + \phi_r + \varepsilon_{it},$$

Notation:

# Methodology and Potential Model Design

Difference and Difference Design with self-identification of race as the event measured.

$$Y_{it} = \alpha + \beta_1 \cdot \text{Post}_{it} + \beta_2 \cdot \text{Treated} + \delta \cdot (\text{Post}_{it} \times \text{Switcher}_i) + X_{it}\theta + \mu_i + \lambda_t + \phi_r + \varepsilon_{it},$$

Notation:

- *Switcher<sub>i</sub>* defines someone who changes their race

# Methodology and Potential Model Design

Difference and Difference Design with self-identification of race as the event measured.

$$Y_{it} = \alpha + \beta_1 \cdot \text{Post}_{it} + \beta_2 \cdot \text{Treated} + \delta \cdot (\text{Post}_{it} \times \text{Switcher}_i) + X_{it}\theta + \mu_i + \lambda_t + \phi_r + \varepsilon_{it},$$

Notation:

- $\text{Switcher}_i$  defines someone who changes their race
- $\phi_r$  is a control for the race of the interview

# Methodology and Potential Model Design

Difference and Difference Design with self-identification of race as the event measured.

$$Y_{it} = \alpha + \beta_1 \cdot \text{Post}_{it} + \beta_2 \cdot \text{Treated} + \delta \cdot (\text{Post}_{it} \times \text{Switcher}_i) + X_{it}\theta + \mu_i + \lambda_t + \phi_r + \varepsilon_{it},$$

Notation:

- $\text{Switcher}_i$  defines someone who changes their race
- $\phi_r$  is a control for the race of the interview
- $\mu_i$  is individual fixed effect (TBD)

# Methodology and Potential Model Design

Difference and Difference Design with self-identification of race as the event measured.

$$Y_{it} = \alpha + \beta_1 \cdot \text{Post}_{it} + \beta_2 \cdot \text{Treated} + \delta \cdot (\text{Post}_{it} \times \text{Switcher}_i) + X_{it}\theta + \mu_i + \lambda_t + \phi_r + \varepsilon_{it},$$

Notation:

- $\text{Switcher}_i$  defines someone who changes their race
- $\phi_r$  is a control for the race of the interview
- $\mu_i$  is individual fixed effect (TBD)
- $\lambda_t$  is a time fixed effect (TBD)

Thank You
